All the experimental protocols were carried out in accordance with the Declaration of Helsinki. A fast moving object cannot be clearly differentiated if the target moves faster [24]. In addition, a 404 error not found was found when trying to use an Errordocument to handle the request. Arch. 2005, 39, 860 "865. For example, the forces of agitation in the central parts (Nantou city in central Taiwan) affected by the 1921 earthquake were 1.5 g of horizontal acceleration (GX or GY) and 0.3 g of vertical acceleration (GY). [Google Scholar] [CrossRef] [PubMed] Solomon, H.; Zinn, W.J.; Vacroux, A. Can. However, prolonged exposure, cumulative effects on traffic jams and relatively high levels of acceleration cannot be ignored. Several studies have shown that stereopsis may gradually decrease each year. All authors reviewed and approved the final manuscript as presented. The authors state that there is no conflict of interest. Whinnery, J.E.; Hunger, A.M. Acceleration-induced loss of consciousness. All experiments were conducted at the Taiwan High-Speed Railway Laboratory (Kaohsiung City) in May 2014. Assn. [Google Scholar] [CrossRef] Bailey, I.L.; Lovie, J.E. New design principles for visual acuity letter cards. Effect of whole body vibration on lumbar bone mineral density, bone turnover and chronic back pain in postmenopausal osteoporotic women treated with alendronate. The VA results can be converted to the equivalent Snellen table (measuring distance is about 6 m) and corresponds to 20/20, 20/25, 20/30, 20/40, 20/50, 20/70, 20/100, 20/200, 20/400 and 20/800 in this study. 2007, 42, 600 – 604.
